# Unity3D Rainbow Folders

Have you ever thought about highlighting often used project folders? This simple but colorful asset allows you to do that! With "Rainbow Folders" you can set custom icon for any folder in unity project browser.

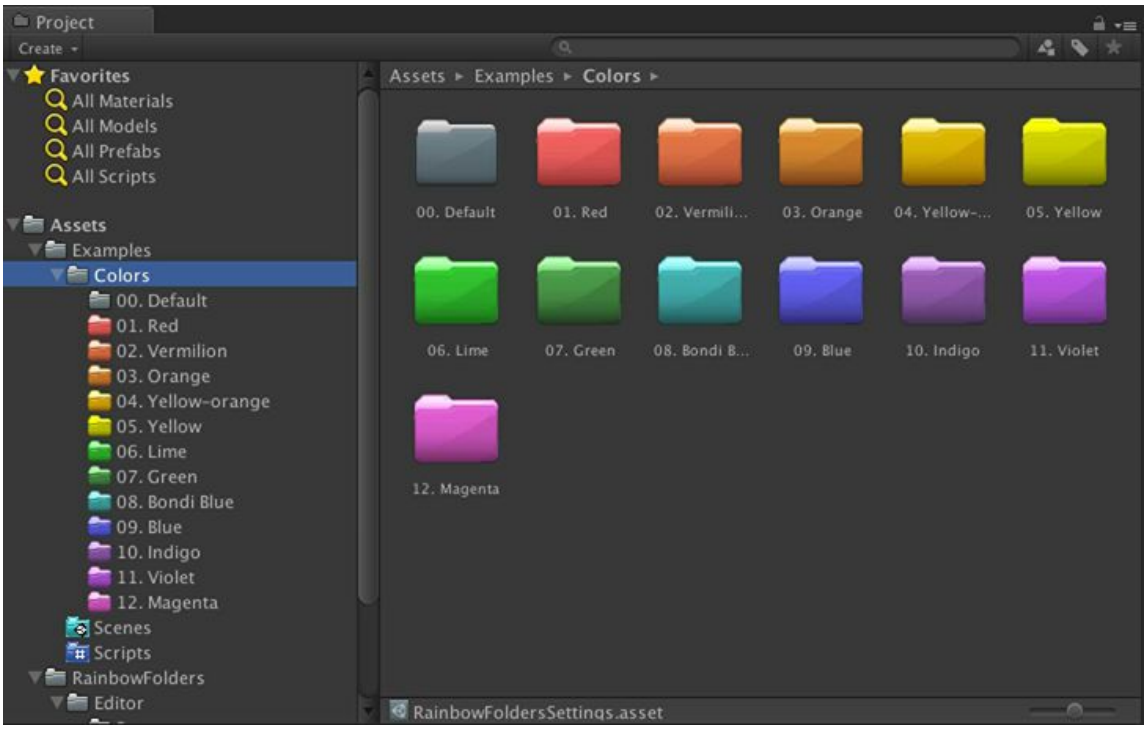
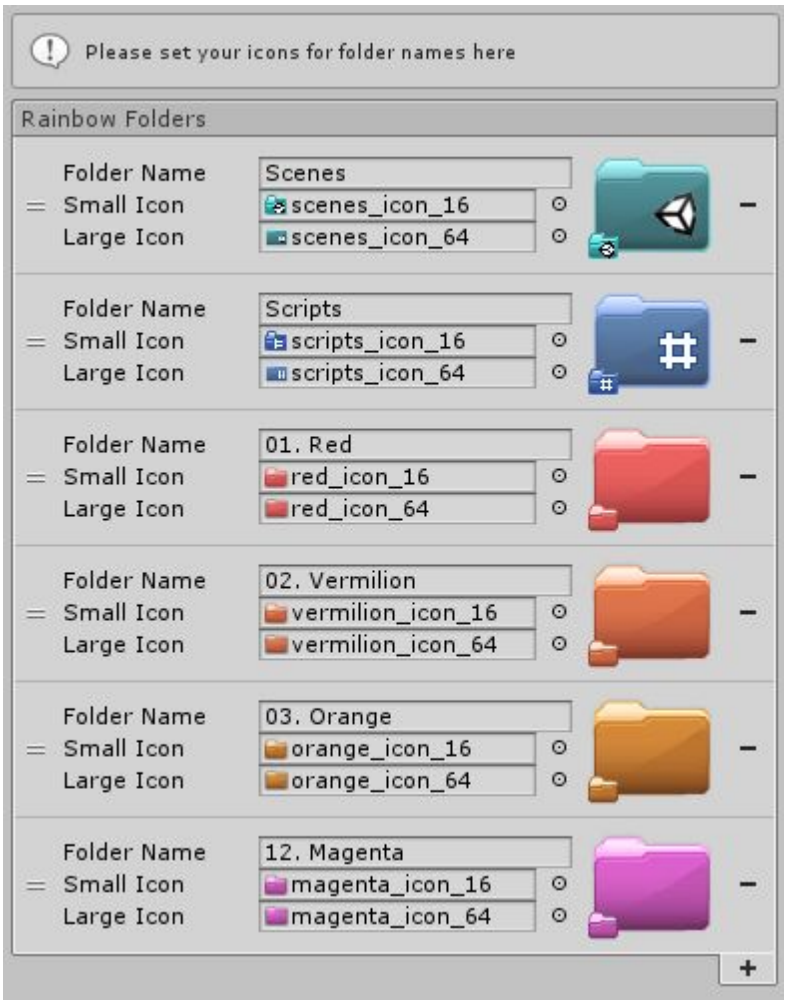
Unity Pro Look



## Configuring folder icons

From the main menu select *Edit -> Rainbow Folders Settings*, then take a look at the Inspector.

There is reorderable list with few predefined "folder" items. You can modify existing items, remove them using "-" button or add new ones by clicking "+" button below.



What you need to configure for each folder item are these fields:

- **Folder Name** - name of the folder you want to change the icon for.
- **Small Icon** - your custom icon for the left panel of the project browser (*16x16 px*)
- **Large Icon** - your custom icon for the right panel of the project browser (*64x64 px*)

Your changes will be applied next time when the project browser will retrieve the focus.
